Sub-levels of Lakehouse

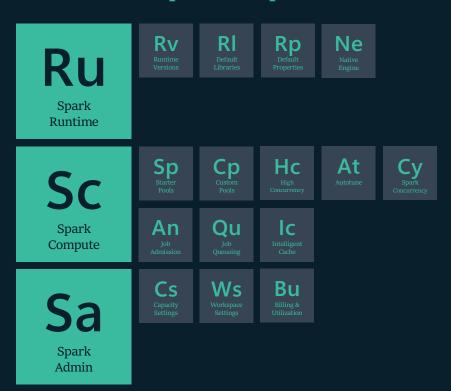

Ad

Fabric Lakehouse

Fabric Lakehouse is the filesystem under a workspace which can store a variety of data/file types for analytics and those can be used by different engines (Spark, SQL, KQL and Power BI).

Sub-levels of Spark Compute

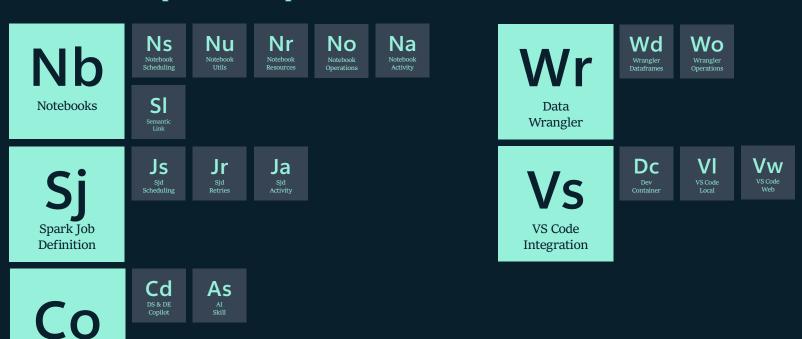

Fabric Spark Compute

Fabric Spark Compute offers multiple runtime versions, along with a range of compute and admin capabilities. Users can configure Spark compute settings inline or use environments.

Sub-levels of Spark Development

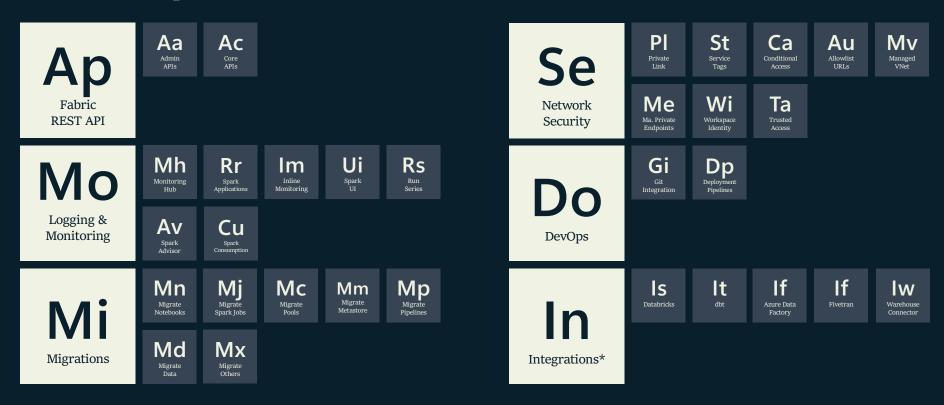

Fabric Spark Development

Copilot

Fabric Spark Development offers various methods for developing Spark jobs, including notebooks and Spark Job Definitions, as well as (co-)development experiences like Copilot, Data Wrangler, and VS Code integration.

Sub-levels of Spark Collaterals

Fabric Spark Collaterals

Additional Fabric Spark related resources to automate, monitor, migrate and managed Spark applications securely.
